AGRICULTURE ◆ SPICES ◆ DRY FRUITS ◆ EDIBLE OILS

ABOUT US

With over 15 years of experience in the import and export industry, we have established ourselves as a trusted partner in the global fertilizer trade. Our expertise lies in sourcing and supplying high-quality agricultural fertilizers, including Sulphur, DAP (Di-Ammonium Phosphate), and Urea, to customers across domestic and international markets.

Our commitment to quality, reliability, and timely delivery has enabled us to build long-term relationships with suppliers, distributors, and customers worldwide. We strive to provide products that support agricultural productivity while maintaining the highest standards of professionalism, integrity, and customer service.

Backed by industry knowledge, a strong global network, and a customer-focused approach, we continue to expand our reach and deliver value to the agricultural sector.

OUR MISSION

Our mission is to provide high-quality agricultural and food products that meet international standards while promoting sustainable farming, food safety, and customer satisfaction. We are committed to sourcing responsibly, ensuring reliable import and export services, delivering value through quality and innovation, and building long-term partnerships based on trust, integrity, and excellence.

OUR VISION

Our vision is to become a globally trusted leader in the agriculture and food products industry by connecting producers and markets through sustainable practices, innovative solutions, and exceptional quality. We aspire to contribute to global food security, empower farming communities, and create lasting value for our customers, partners, and society.

AGRICULTURE

BASMATI RICE

Basmati rice grades are primarily determined by grain length, purity (lack of broken/adulterated grains), aroma, and aging. Premium grades feature extra-long grains (8.2 mm or longer) that grow up to twice their size when cooked, remain non-sticky, and are naturally aged.

Grading by Quality / Dimensions
Categorized into specific grades for domestic use and international market :

Premium Grade : The highest quality, with a grain length of 8.2 mm to 8.4 mm (XXXL extra long grain basmati). They are 100% pure, contain practically zero broken grains, and command premium pricing.

Grade A : Features a raw grain length between 7.5 mm and 8.1 mm. These must be at least 98% pure and are ideal for standard premium cooking.

Standard / Economy Grade: Grain length typically falls between 6.5 mm and 7.4 mm. These bags often contain a mixture of smaller grains or non-basmati varieties.

Non-basmati rice is graded primarily by its grain length, percentage of broken kernels, and overall purity. Common classifications include Premium Grade (6–6.5mm, max 2% broken), Grade A (5.5–6mm, max 5% broken), and Standard Grade (less than 5.5mm, max 10% broken).

These grades are also processed and categorized into specific types based on milling and cooking styles :

Raw vs. Parboiled : Raw rice retains its natural starch, while Parboiled (or Sella) rice is steamed before milling for firmer grains and better nutrient retention.

Popular Varieties : In India, famous non-basmati types include sona masoori (light and aromatic), IR64 (high yield, non-sticky).

Applications : Premium grades are usually exported or used for retail, whereas standard and Grade A options suit bulk catering and everyday consumption.

NON BASMATI RICE

SPICES

TURMERIC

Raw turmeric root and its powdered form consist primarily of carbohydrates (60–70%), water (10–13%), dietary fiber (20–22%), proteins, fats, and minerals. Its defining active compound—curcumin—accounts for an average of 2% to 9% by weight, alongside other active curcumin and essential oils.

Curcumin : 2% to 9% (with curcumin making up the vast majority)

Essential Oils: 3% to 7% (e.g., turmerone, zingiberene)

Chilli are packed with the active compound that provides their signature spicy heat (SHU) and are rich in water, vitamin C, vitamin A, vitamin B6, and potassium.

Active & Bioactive Compounds : The most famous of these is capsaicin, which gives chillies their intensity and is concentrated in the white placental tissue that holds the seeds.

Antioxidants : Chillies contain beneficial plant compounds like violaxanthin, lutein, and sinapic acid, which help reduce oxidative stress.

CHILLY

CUMIN SEEDS

Cumin is a dried, boat-shaped seed from the Cuminum cyminum plant. It is composed of 44% carbohydrates, 22% fat, 18% protein, and 8% water. Its distinct warm, earthy, and slightly citrusy flavor comes from volatile essential oils, primarily cuminaldehyde.

Spice Blends : Chili powder, garam masala, curry powder, taco seasonings, Adobo seasoning, and Ethiopian berbere.

Dishes : Frequently used in Tex-Mex dishes, Indian zeera (cumin) rice and curries, and Middle Eastern stews.

SPICES

CARDAMOM

Cardamom is a highly aromatic spice containing essential oils (3–8%) rich in 1, 8-cineole and a-terpinyl acetate. Per tablespoon, ground cardamom provides 18 calories, 1.6 grams of fiber, and is a rich source of manganese. It also acts as a traditional aid for digestion and high blood pressure.

Nutritional Breakdown (per 1 tbsp / 6g ground)

Calories : 18

Carbohydrates : 4.0g

Dietary Fiber : 1.6g

Protein : 0.6g

Total Fat : 0.4g

King of Spices, Black Pepper is a single-ingredient spice made from the dried, unripe berries of the Piper nigrum vine. Its signature heat and health benefits come from the active alkaloid compound piperine. It also contains natural essential oils and volatile compounds that provide citrus and floral notes.

Piperine : The main alkaloid that gives black pepper its characteristic pungency. It has potent antioxidant properties and is known to enhance the absorption of other nutrients and medications.

Essential Oils : Includes compounds like limonene (citrusy), pinene (pine/woody), and linalool (floral) which make up its unique aroma profile.

BLACK PEPPER

CLOVES

Cloves are the aromatic, dried unopened flower buds of the Syzygium aromaticum evergreen tree. These nail-shaped buds get their characteristic pungent flavor and warm, sweet aroma primarily from a powerful essential oil compound called eugenol.

The buds are hand - picked while still immature (when they turn bright pinkish -red) and dried under the sun until they turn dark brown.

Eugenol : Accounting for 70% to 90% of the spice's essential oil, this compound is responsible for the intense flavor, numbing sensation (often used in dental care), and anti-inflammatory benefits.

SPICES

CORIANDER

Coriander is a dual-purpose herb where both the leaves and seeds are consumed. The fresh leaves (cilantro) and dried seeds (dhaniya) provide distinct flavor profiles to international cuisines.

Coriander Seeds (Dhania) :

Primary Compound : 100% dried fruit (seeds) of the Coriander sativum plant.

Flavor Profile : Earthy, slightly sweet, with a lemony-citrus note.
The aroma is driven by naturally occurring terpenes like linalool and pinene.

Applications : Essential for spice blends like Garam Masala and Curry Powder. Ground coriander loses its flavor quickly and is best prepared from fresh Whole Dried Seeds.

Cinnamon is a versatile inner bark known for its signature active compound, cinnamaldehyde (which gives it its distinct aroma and flavor). A 1-teaspoon (2.6g) serving contains about 6 calories, 2g of carbohydrates, and 1.3g of fiber. It also contains trace minerals like calcium and potassium.

Ceylon Cinnamon (True Cinnamon) : Known for its milder, sweeter, and more complex flavor profile. It is highly prized because it contains negligible amounts of coumarin, making it the safer choice if you consume cinnamon regularly in higher doses.Cassia Cinnamon: This is the more common variety found in most grocery stores. It has a stronger, spicier flavor, but contains higher levels of coumarin, which can cause liver damage in excessive quantities.

CINNAMON

MUSTARD SEEDS

Based on your query, it looks like you are searching for content related to mustard / master seeds or supplies from Maaster Seeds. Since the content varies significantly depending on your interest, refer to the relevant section below.

Mustard seeds (rai) are a staple in Indian kitchens and are highly valued for their bold flavor and health benefits.

OIL SEEDS

SESAME SEEDS

Sesame seeds are entirely plant-based and consist of 100% whole sesame seeds. They are composed of 45% - 65% natural oils, 19% - 35% protein, and 14% - 20% carbohydrates. They are highly nutritious, providing fiber, B vitamins, antioxidants, and essential minerals like calcium, iron, and magnesium.

Healthy Fats : Composed of unsaturated fatty acids, primarily oleic and linoleic acids, which benefit heart health.

Protein & Amino Acids : Rich sources of methionine and cysteine.

Specialized Antioxidants : Contain unique phytochemicals called lignans (such as sesamin and sesamolin) and phytosterols, which help lower cholesterol.

Trace Minerals : High in calcium, copper, zinc, and manganese.

Soybeans are a nutrient-dense legume commonly used to create plant-based proteins, dairy alternatives, and cooking oils. Primary ingredients include whole soybeans, defatted soy flour (for textured protein), and water. They are rich in isoflavones, protein, and essential micronutrients like folate and Vitamin K.

SOYABEAN

GROUND NUT

Groundnuts (peanuts) are highly nutritious, boasting approximately 25g of plant-based protein per 100g, along with 49g of heart-healthy mono unsaturated and polyunsaturated fats, and 16g of carbohydrates. They also provide 8.5g of dietary fiber and are naturally cholesterol-free. Beyond macro -nutrients, groundnuts are packed with essential vitamins, minerals, and bioactive compounds.

B-Vitamins : Rich in Niacin (Vitamin B3) for energy, Folate (Vitamin B9) for cell health, and Biotin (Vitamin B7) for hair and nails.

Vitamin E: A powerful antioxidant that helps protect cells from damage.

EDIBLE OILS

SUNFLOWER OIL

Sunflower oil is 100% fat, providing about 120 calories and 14 grams of fat per tablespoon. It is completely free of protein, carbs, cholesterol, and sodium. Its primary components include high levels of vitamin E, polyunsaturated omega-6 fatty acids (linoleic acid), and varying amounts of mono unsaturated fats (oleic acid).

Polyunsaturated Fats (PUFA) : Standard sunflower oil is very rich in linoleic acid (Omega-6), making up about 48% to 74% of its fat content.

Mono unsaturated Fats (MUFA) : Also known as oleic acid. Traditional oil contains about 14% to 40%. However, High-Oleic Sunflower Oil is specially cultivated to contain up to 80% mono unsaturated fats, making it more heat-stable for cooking.

Saturated Fats: It is relatively low in saturated fats, typically containing between 10% and 15% (comprising palmitic and stearic acids).

Soybean seeds naturally contain about 18% to 24% oil by weight, along with 36% to 40% protein and 26% carbohydrates. Extracted and refined, the oil is entirely composed of fats (100 g per 100 g) and is valued for its high concentration of heart-healthy unsaturated fatty acids.

Linoleic Acid : 51% to 58% (a polyunsaturated omega-6 fatty acid).

Oleic Acid : 17% to 30% (a mono unsaturated omega-9 fatty acid).

Palmitic Acid : 9% to 13% (a saturated fat).

a-Linolenic Acid : 4% to 11% (a polyunsaturated omega-3 fatty acid).

Stearic Acid : 2.5% to 5% (a saturated fat).

SOYABEAN OIL

GROUND NUT OIL

Groundnuts (peanuts) typically contain between 45% and 55% oil by weight, depending on the specific variety, moisture levels, and growing conditions. In terms of yield, 1 kg of raw groundnut kernels will generally produce about 0.4 to 0.45 liters (or roughly 400 to 450 grams) of oil.

Kernel Composition : The kernels themselves consist of about 46% to 51% oil and are also rich in proteins (about 26%) and healthy unsaturated fatty acids.

Differences : Different species naturally vary in their yields. For instance, the Valencia variety yields around 37.8% oil, while Virginia and Runner varieties vary in their extraction yields.

DRY FRUITS

CASHEW NUTS

Cashews are nutrient - dense nuts packed with heart - healthy unsaturated fats, plant-based protein, and dietary fiber. They are particularly rich in essential minerals like copper, magnesium, zinc, and iron, along with beneficial antioxidants such as polyphenols.

A standard 1-ounce (28-gram) serving of raw cashews contains approximately :

Calories : 163 Protein: 4.3 grams Carbohydrates: 9.3 grams

Total Fat: 13.2 grams Dietary Fiber: 0.9 grams

Saffron is chemically composed of over 150 volatile and aroma - yielding compounds, but its three most vital active phytochemicals are crocin (responsible for color), picrocrocin (for bitter taste), and safranal (for aroma). Dried threads contain roughly 65% carbohydrates, 11% protein, 6% fat, and trace minerals like manganese.

Crocin : A carotenoid that gives foods a rich golden - yellow color. It acts as a powerful antioxidant and is linked to potential neuro protective and antide pressant properties.

Safranal : A volatile terpene aldehyde that gives saffron its distinct honey - metallic scent. It is under preliminary research for its anti - inflammatory and anti-depressant benefits.

SAFFRON

ALMONDS

Almonds are highly nutrient - dense edible seeds packed with plant - based protein, dietary fiber, and healthy mono unsaturated fats. They are exceptionally rich in vitamin E, magnesium, and riboflavin (vitamin B2).

A standard 1-ounce (28-gram) serving of almonds contains :

Calories : 164 Protein: 6 grams Carbohydrates : 6.1 grams

Total Fat : 14.2 grams Dietary Fiber: 3.5 grams

Vitamin E: 7.3 milligrams (approx. 48% of the daily value)

Magnesium: 76.7 milligrams (approx. 18% of the daily value)

TEA & COFFEE

TEA

Real tea comes from the Camellia sinensis plant, but "tea" usually includes herbal blends. The exact makeup depends on the variety :

True Teas (Black, Green) : Leaves from Camellia sinensis, containing caffeine, amino acids (like theanine) and flavonoids (catechins).

Indian Masala Chai : Water, milk, black tea leaves, and spices like ginger, green cardamom, cloves, and cinnamon.

Herbal Teas : Caffeine-free infusions made from botanicals, dried fruits, or herbs like chamomile, peppermint, or rooibos.

Coffee is a brewed beverage from roasted beans, widely consumed for its stimulating effects. Its primary components include caffeine, tannins, carbohydrates, and proteins. A standard 8 - oz brewed cup contains about 95 – 100 mg of caffeine, while espresso delivers about 63 mg per shot.

According to health experts, up to 400 mg of caffeine per day (roughly 4 – 5 cups of filter coffee) is generally considered safe for healthy adults.

Pregnant or nursing individuals and those sensitive to stimulants should significantly lower their daily intake.

Brewed Coffee : ~80–100 mg per 8-oz serving. Espresso : ~63 mg per 1-oz shot.

Cold Brew : ~153–238 mg per 12-oz serving. Instant Coffee : ~62 mg per 8-oz serving

COFFEE

COCO

Unsweetened cocoa powder is a nutrient-dense ingredient. A standard 1 - tablespoon (5g) serving contains approximately 10 calories, 3g of carbohydrates (including 2g of dietary fiber), 0g of sugar, and 0.5g of fat. It is also a rich source of antioxidants, iron, and magnesium.

Natural Unsweetened Cocoa Powder : Retains the bean's natural, acidic pH, is light brown, and carries a very intense, fruity chocolate flavor.

Cacao Powder : Made from cold-pressed, unroasted beans. It retains the maximum possible nutrient and antioxidant content.

FOOD INGREDIENTS

DEHYDRATED ONION

Dehydrated onion powder contains highly concentrated flavor without fresh water weight. Per 100g, it provides about 342 kcal, 10g of protein, 79g of carbohydrates (including 15g of dietary fiber), and only 1g of fat. It naturally retains essential minerals like iron and calcium and typically maintains a low moisture content of 4% to 6%.

Because the vegetable is completely dried and pulverized, the powder serves as a concentrated, shelf-stable seasoning. Its exact chemical and nutritional makeup includes :

Basic Moisture : 4% – 6% (must be kept within this limit to prevent caking)

Volatile Oils : ≥ 0.25% (responsible for the pungent flavor and natural aroma)

Ash Content : ≤ 4% – 7% (reflects the mineral residue after burning off organic)

Dehydrated garlic powder is made by drying and grinding fresh garlic cloves. It contains zero fat, highly concentrated carbohydrates, and contains less than 5% moisture. It delivers essential nutrients like calcium, iron, and potassium while remaining shelf-stable for up to 12 months.

For standard international commercial limits, dehydrated garlic powder generally requires : Moisture Content : ≤ 5% to 6%Volatile Oil Content: ≥ 0.3% Ash Content : ≤ 4%

Calories : 331 kcal Protein : 16.6 g

Carbohydrates : 72.7 g (with 9 g dietary fiber and 2.4 g natural sugar)

DEHYDRATED GARLIC

DEHYDRATED GINGER

Dehydrated ginger powder is a highly concentrated spice. Its core composition relies on low moisture content (6% to 10%). It typically yields 1.5% to 7% of gingerol (the active compound responsible for its pungent kick) and 1% to 3% volatile oils, retaining a strong aroma and flavor.

The remaining nutritional breakdown (per 100g) of standard commercial

dehydrated ginger powder includes :

Carbohydrates : ~70% to 72% Dietary Fiber: ~12% to 14%

Protein: ~6% to 9%
